How to Identify your Stable Panels

Front/Back Panel

Front and Back Panels have one steel tube for the drop pin on each side

Left/Right Hand Panel

Both Side Panels have 2 steel tubes on each side, one for the drop pin and one which allows for further stables to be joined on.

Left and Right Walls have 'Contained Lugs and Pins for Day Yard Attachments. These need to point to the FRONT of the stable.

Assemble your Stable

1. Place panels on the ground where the stable is going, making sure the Solution Stables stencil will face out when Stable is up.
2. Starting with one side panel and back panel, stand them up and secure with drop pins at the top and bottom.
3. Continue with next side panel, securing it with drop pins and finish with front panel.
4. The drop pins will secure the panels together ensuring they wont move around.
5. Attach Rug Rack with Rug Rack Bolts to the Front Panel
